

Ivermectin use can end Covid-19 pandemic: Study

PNS ■ NEW DELHI

Ivermectin use can end the Covid-19 pandemic as the medicine significantly reduces the risk of contracting the deadly respiratory disease when used regularly, according to a peer-reviewed research published in the American Journal of Therapeutics.

Ivermectin is a broad spectrum anti-parasitic agent, included in WHO essential medicines list for several parasitic diseases. It is used in the treatment of onchocerciasis (river blindness), strongyloidiasis and other diseases caused by soil transmitted helminthiasis. It is also used to treat scabies. The WHO recommends that the drug only be used within clinical trials.

However, led by the Front Line Covid-19 Critical Care Alliance (FLCCC), a group of medical and scientific experts reviewed published peer-reviewed studies, manuscripts, expert meta-analyses, and epidemiological analyses of regions with iver-

mectin distribution efforts all showing that ivermectin is an effective prophylaxis and treatment for Covid-19.

"We did the work that the medical authorities failed to do, we conducted the most comprehensive review of the available data on ivermectin," said Pierre Kory, MD, president and chief medical officer of the FLCCC. "We applied the gold standard to qualify the data reviewed before concluding that ivermectin can end this pandemic."

A focus of the manuscript was on the 27 controlled trials available in January 2021, 15 of which were randomised controlled trials (RCT's).

Consistent with numerous meta-analyses of ivermectin RCT's since published by expert panels from the UK, Italy, Spain and Japan, they found a large, statistically significant reduction in mortality, time to recovery, and viral clearance in Covid-19 patients treated with ivermectin.

"Our latest research shows, once again, that when

the totality of the evidence is examined, there is no doubt that ivermectin is highly effective as a safe prophylaxis and treatment for Covid-19," said Paul E. Marik, founding member of the FLCCC and Chief, Pulmonary and Critical Care Medicine at Eastern Virginia Medical School.

Many regions around the world now recognise that ivermectin is a powerful prophylaxis and treatment for COVID-19. South Africa, Zimbabwe, Slovakia, Czech Republic, Mexico, and India have approved the drug for use by medical professionals.

The results, as seen in this latest study, demonstrate that the ivermectin distribution campaigns repeatedly led to "rapid population-wide decreases in morbidity and mortality".

"We are calling on regional public health authorities and medical professionals around the world to demand that ivermectin be included in their standard of care right away so we can end this pandemic once and for all," Marik noted.

Ivermectin. WHO scientist faces death penalty

India could be the first country to sue a WHO scientist for advising against Ivermectin against Covid-19. The Indian Bar Association has initiated proceedings.

Covid: Ivermectin to be studied as possible treatment in UK

It is a strong proven position that both hydroxychloroquine + azithromycin + zinc and ivermectin showed strong promise as cheap, effective treatments vs covid-19 now appears to be proven correct.

Of course, up until this point, the media has parroted "junk science" talking points designed to malign and vilify these treatment candidates, very likely on behalf of Big Pharma who can't reap \$billions off of them. And in the meantime, millions of sick patients worldwide have likely been denied these drugs as a result.

How many people have died/suffered as a result?

A 97% decline in Delhi cases with Ivermectin is decisive - period. It represents the last word in an epic struggle to save lives and preserve human rights. The victory of reason over corruption, good over evil, and right over wrong. It is as significant as David's story over Goliath. It is an absolute vindication of Ivermectin and early outpatient treatment. It is a clear refutation of the WHO, FDA, NIH, and CDC's policies of "wait at home until you turn blue" before you get treatment.
